

Energy Management & Emissions Reduction Policy

Energy Management and Emissions Reduction Policy Statement

Barton Firtop Engineering Co Limited is a privately owned Company which manufactures filters, strainers, coalescers and associated assemblies for fluid processing applications.

The Company has established and complied with an Energy Management System that adheres to the requirements of ISO 50001:2018.

The Company is committed to promoting the continual improvement of its significant internal and external energy & emissions through frequent monitoring & measurement of all aspects of its operations.

The Company will achieve this by:

- Establishing, monitoring, and reviewing energy performance objectives and targets to drive continual improvement in energy & emissions management.
- Compliance of the energy management system is supported by an annual energy review which examines current energy use, sets benchmarks, and identifies areas where improvements can be made.
- Comply with all applicable legal requirements and other obligations related to energy use, efficiency, and emissions.
- Where available, grants will be sought to improve energy efficiency.
- The compliance of the energy management is a function of the QA/HSE department in collaboration with other relevant departments. An energy action plan is communicated to management. The action plan sets targets for energy consumption, efficiency, and emissions.
- Energy efficiency will be considered at the design stage of any new building projects, premises upgrades or refurbishment.
- Full use is made of natural lighting wherever possible. Artificial lights will be turned off when it is safe to do so but not if this reduces illumination below acceptable standards or causes a safety issue.
- Energy efficiency will be considered in the purchase of all new equipment, eg lighting, computers, machinery, etc. Inefficient equipment, plant, and fittings, such as heating and light fittings, will be replaced with modern, more energy-efficient units wherever possible.
- Heating and mechanical ventilation will be maintained at suitable levels which is compliant with applicable legal requirements.
- Identify and provide appropriate training, advice and information on energy management and emissions.
- Promoting and seeking active participation of employees, customers, and suppliers to ensure achievement of its objectives and targets.
